Summary

Software engineer with 7+ years of experience designing and building financial systems and full-stack products, including 4+ years of technical leadership. BSc (Honours) in Computing Science, specializing in machine learning.

Experience

Bitcoin Well

Jan. 2024 - Present

Intermediate Software Engineer - Edmonton, AB

- Designed and maintained financial infrastructure covering bank integrations, transaction processing, reconciliation, and asynchronous transaction lifecycles, including failure recovery.
- Spearheaded development of our AI engineering workflow, leveraging technologies like OpenClaw to overhaul and massively streamline implementation, debugging, code review, and QA.
- Hardened backend systems against security vulnerabilities by developing an AI-driven security audit pipeline to identify exploits before and after deployment.
- Built an internal FINTRAC reporting system that automated reporting workflows, improving submission accuracy and freeing compliance teams to focus on higher-priority work.
- Optimized the customer onboarding flow with product, increasing monthly signups by 47%.
- Drove ambiguous technical problems across product, frontend, backend, infrastructure, and financial systems from investigation through production.

NeurAlbertaTech

Feb. 2019 - Feb. 2024

CTO - Edmonton, AB

- Designed and launched the organization's marketing website, directly supporting over \$500,000 in funding and acquisition of thousands of hackathon participants.
- Led development of a modular suite of internal tools for event logistics, identity verification, and micro-credentials.
- Built and delivered hundreds of hours of workshops covering software development, machine learning, and brain-computer interfacing.
- Technical lead across hackathons, internal teams, and student projects - mentoring developers and contributing to product and technical strategy.

Ghostlab

May. 2021 - Aug. 2022

Software Engineering Intern - Edmonton, AB

- Built and shipped the cash-out feature, increasing platform revenue by over 20%.
- Identified and fixed a nuanced fee calculation bug responsible for thousands of dollars of lost revenue per month.
- Proposed and implemented a new UX flow that significantly reduced friction, improving conversion for first-time users.

NeuroTechX

Sep. 2020 - Nov. 2020

BCI Course Developer - Montreal, QC

- Developed NeuroMaker's initial Brain-Computer Interface curriculum, contributing to an educational platform now used by 300+ schools across North America.
- Distilled complex topics such as neuroscience, ethics, signal processing, machine learning, and software development into hands-on lessons and programmable projects.

Technical Skills

Languages: JavaScript / TypeScript, Python, C++, HTML, CSS

Frameworks: Angular, React, Next.js, Astro, Django

Cloud / Infrastructure: AWS, Docker, GitHub, Bitbucket, Jira

Education

University of Alberta

BSc, Honours Computing Science (ML Specialization)

2018 - 2024
